Safety Share: Steps To Safe Lifting And Handling

Using proper lifting techniques can help prevent back injuries both on and off the job. Follow these tips to avoid compressing the spinal discs or straining your lower back when you are lifting:

- **Keep a wide base of support.** Your feet should be shoulder-width apart, with one foot slightly ahead of the other
- **Squat** down, bending at the hips and knees only.
- **Keep good posture.** Look straight ahead, and keep your back straight, your chest out, and your shoulders back.
- **Slowly lift** by straightening your hips and knees (not your back). Keep your back straight, and don't twist as you lift.
- **Hold** the load as close to your body as possible, at the level of your belly button.
- **Use your feet** to change direction, taking small steps.
- **Lead with your hips** as you change direction. Keep your shoulders in line with your hips as you move.
- **Set down** your load carefully, squatting with the knees and hips only.

The Newmont Safety Journey

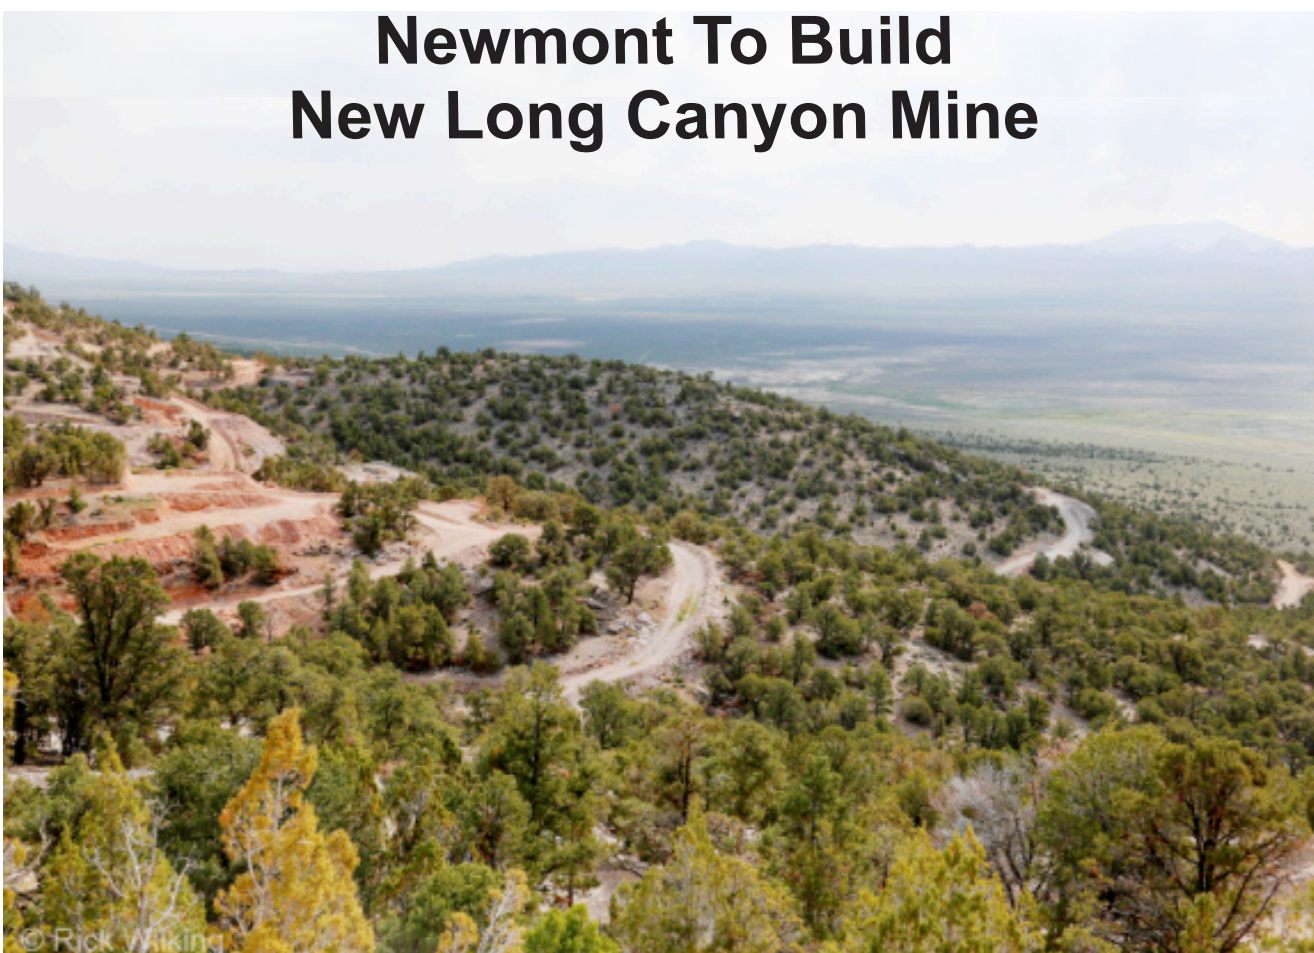

West Wendover Easter Egg Hunt Donation

On April 4th, hundreds of children from West Wendover participated in the Annual Easter Egg Hunt. Newmont once again donated to the fun event!

Children from West Wendover scramble to fill their baskets with Easter eggs.

Newmont To Build New Long Canyon Mine

Long Canyon Project site

Following the Bureau of Land Management (BLM) Record of Decision on April 7th, 2015, Newmont announced the decision to build the Long Canyon Mine, an oxide mine with significant upside potential in an emerging gold district located on the eastern side of the Pequop Mountain Range in Elko County, NV., between West Wendover and Wells.

The decision al-

lows for Newmont to construct and operate an open pit mine and heap leach operation, with expected gold production between 100,000 and 150,000 ounces per year over a ten year mine life. The BLM decision was to select the North Facilities Alternative with Newmont-committed environmental protection measures and the mitigation measures outlined in the Long Canyon Mine Final Environmental Impact Statement (EIS).

Federal and state permits necessary to proceed with development of the project have been secured following a 36-month analysis

and public participation period. Once in operation, Long Canyon is expected to employ around 300 people. Newmont will continue to engage and partner with local and regional stakeholders throughout construction, operations and closure.

2015 marks a special year for Newmont Mining. In May 1965, Newmont poured its first gold on the Carlin Trend. As we celebrate the 50th anniversary of this important milestone, we also celebrate the first year of many at Long Canyon. We owe these accomplishments to our employees, the strong partnerships we

have built and the ongoing support we have received from the local communities and the state of Nevada since we first began operating here.

Newmont looks forward to many more years of mining in Nevada with an emphasis on the health and safety of our employees, stewardship of the environment and the sustainable support of the economy and the communities with whom we partner.

Please direct any Long Canyon related questions to Pamela.Smith@Newmont.com.

First Quarter Legacy Fund Donations

The Legacy Fund, Newmont's employee giving campaign, will soon distribute \$617,314.00 to over 175 nonprofit organizations throughout northeastern

Nevada for the first quarter's donations. These donations provide critical funding to nonprofit organizations that offer our communities essential programs and

services. About 2,300 Newmont Nevada employees donate to a nonprofit recipient of their choice, and Newmont matches the employees' donation dollar-for-dollar.

Our Vision

We will be recognized and respected for exceptional economic, environmental and social performance
